

IMPORTANT: Remove tab before use!

Lights will not operate until you remove the tab as shown (see drawing). Lights turn on when you move the UFO. Lights will stay on for 12 seconds once you stop moving the UFO.

Changing the Battery in Your Mystery Lights UFO™

1. Remove both screws and open the battery case.

2. Remove old battery. Insert one new CR-1025 3V lithium battery. Be sure to insert the battery with the positive (+) side facing up.

3. Replace the battery case cap and screws. The lights should turn on when you move the UFO.

Non-rechargeable batteries are not to be recharged; rechargeable batteries are to be removed from the toy before being charged; rechargeable batteries are only to be charged under adult supervision; different types of batteries or new and used batteries are not to be mixed; batteries are to be inserted with the correct polarity; exhausted batteries are to be removed from the toy

1. THE SECRET

Mystery Lights UFO™ creates its amazing effect using secret invisible thread that makes the UFO seem to float in mid air! Under the UFO in this packaging, you will find 8 posts with thread wrapped around each one ready to go. Each post has a thin triple strand of some of the strongest thread in the world with sticky putty attached to each end. Although the threads are strong, they are extremely thin and very difficult to see. Be very careful not to break these fine threads. Notice one of the posts has a thick length of thread attached to it. Use this to practice so you do not break the other more fragile sets of thread. If you somehow break all seven of the thin sets, you can make more by separating the thick thread into lengths of three strands each.

2. THE SET UP

You can easily set up this fantastic effect in seconds! Turn the thread post sheet upside down and carefully pull off one piece of putty at the top of a post as shown in FIG A. The thread will automatically unwind and hang straight down with the putty dangling as shown in FIG B. Place the thread through the slot at the top of the UFO and firmly stick the putty underneath the center of the top as shown in FIG C. Pull off the other piece of putty from the base of the post, pull the thread over your ear, and attach the putty to the inside of the back of your shirt by firmly smearing the putty on your inner collar as in FIG D. The UFO should hang about at your belly button. If it hangs too low, you can either attach the putty lower on your shirt or roll the putty up the thread until it reaches your belly button and smash the thread into the putty several times. Then reattach the putty. Now you are ready to float your UFO! You can watch the video of the set up and floating techniques at www.MyMysteryUFO.com. Type in the secret password "AmazeMe" to play the instruction video. When first learning, be very careful with the threads. If you break a thread, don't worry--you have 6 more ready to go, and you can make many more by pulling apart the thick thread. If you are careful, each set of thread can last a very long time! If you need extra threads, you can get them at www.MyMysteryUFO.com.

3. START IT SPINNING

Mystery Lights UFO™ works best indoors, wearing a dark shirt (preferably patterned). The thread is almost impossible to see in dim lighting so keep it away from bright lights and white walls. Remember to practice, practice, practice in front of a mirror before amazing your friends! You can practice with the thick thread at first to get the hang of it without breaking the thin threads. Start the UFO floating by spinning it. Lean forward so the UFO hangs freely and hold the UFO as shown in FIG 1. Rapidly spin the UFO by flipping your hands in opposite directions as shown in FIG 2. The faster and smoother the spin, the better and longer the effect. If you're having trouble getting a fast, level spin, try spinning it on a table like a top. In fact, this is a good way to start the UFO floating--first get it spinning on a table and then slowly lift your head. The UFO will float up to your hand as in FIG 3! Once you have spun the UFO in one direction for a while, spin it the other way so the threads don't get too twisted.

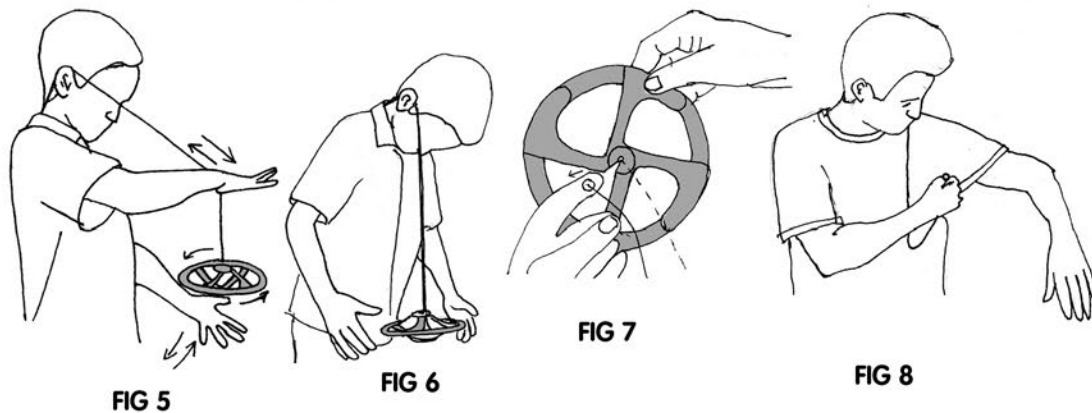

4. FLOATING YOUR UFO

Technique #1: Once you have the UFO spinning quickly and smoothly, capture the thread between your thumb and forefinger as shown in FIG 4. Move your hand mysteriously up and down the string while keeping the UFO in the same position as in FIG 5. Slowly wiggle your fingers to give a magical appearance. Keeping the UFO still while moving your hand along the string is very important as it will seem the UFO is not in any way attached to your hand. This is the main thing you need to practice. At the same time, move your other hand slowly up and down below the UFO. You can tell the spectators that it's floating due to the magnetism or static electricity built up in your hands. They won't be able to float the UFO themselves once you secretly take the putty off and throw them the unattached UFO. If they ask you why they can't do it, tell them it's a mystery!

Technique#2: After you have floated the UFO between your hands, lean in and tilt your head forward and slowly lower your hands so the UFO is simply hanging from your ear. Move your hands mysteriously around the UFO to show that nothing is connected to the sides as in FIG 6. At this point you can turn your whole body around 360 degrees to show that the UFO can float all the way around you! Finish by landing the UFO on a table or simply grab it out of the air! You can see more advanced techniques at www.MyMysteryUFO.com.

Finish: After you have floated and landed the UFO a few times, secretly take the putty off and stick it to your finger (see FIG 7). As you back up, tell the spectators it also flies like a flying disc. Then throw it like a disc to them and they won't be able to float it themselves no matter how hard they concentrate! You can tell them that only you have enough magnetism or static electricity in your hands to levitate the UFO. Watch a video of an entire routine at www.MyMysteryUFO.com.

5. STORING THE THREADS

After you have floated the UFO, you may want to keep the thread attached so you can float the UFO at any time. Simply press the UFO putty under your armpit where no one will see it as shown in FIG 8. Your hands are now free to do whatever you like without disturbing the thread, and the UFO is ready to go whenever you want! Keep the unused threads on the posts in the packaging. You can use the threads over and over again. Just unstick the putty from your shirt and UFO, stick one end to a wall or shelf in your room, and simply let the thread hang straight down. Then you can pull the putty off the wall whenever you want to float the UFO! To make extra thin threads from the thick thread, simply take the putty off of the ends and hold the ends up to a white piece of paper so you can see the ends well. Pull three strands out while holding the other end with your other hand.
